

Project Name: Bedroom Environment Monitor

Student Name: Conor Weekes

Student ID: 20084449

Project Description:

This project will consist of a small connected system using a Raspberry Pi. The system will collect environmental data such as temperature and humidity and movement detected and will be processed using rules in python.

The project will include the main layers of a connected device system, including data input, processing, networking, and a basic user-facing output. The data will be displayed using web page or console output and may include basic logging or alerts.

Overall, the project will display a simple IOT network from using sensor data collected in my bedroom before being processed and displayed via the web.

Tools, Technologies and Equipment:

- Raspberry Pi
- Sense HAT
- Python
- Flask (or similar)
- HTTP / basic networking
- Git and GitHub
